

- 1) Kiran draws a bar model to compare the lengths of two different animals' tails.

Complete the missing information:

The rat's tail is _____ times longer than the tail of the harvest mouse.

The harvest mouse's tail is 6cm long.

_____ × _____ = _____

The rat's tail is _____ long.

- 2) A yellow butterfly's wingspan is 4cm. A blue butterfly's wingspan is 5 times as big.

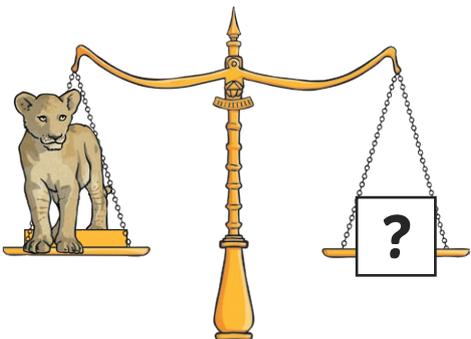

Draw a bar model to represent both wingspans.

Write a calculation to find the wingspan of the blue butterfly.

- 3) Kat measured the mass of a lion cub.

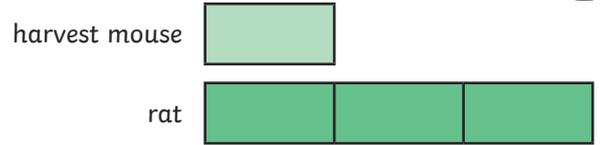

Two months later, the lion cub weighed 8 times as much.

How many kilogram weights would Kat need to balance the mass of the tiger cub now?

How many kilogram weights would Kat need to balance the mass of the tiger cub now?

1) Match each bar model to the facts it represents.

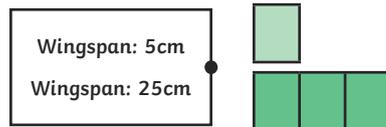

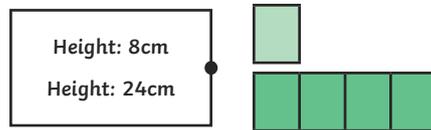

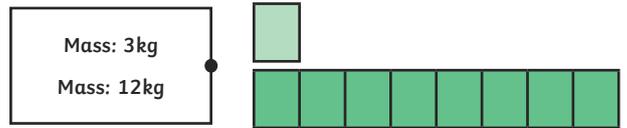

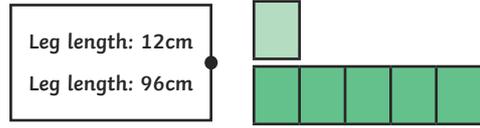

2)

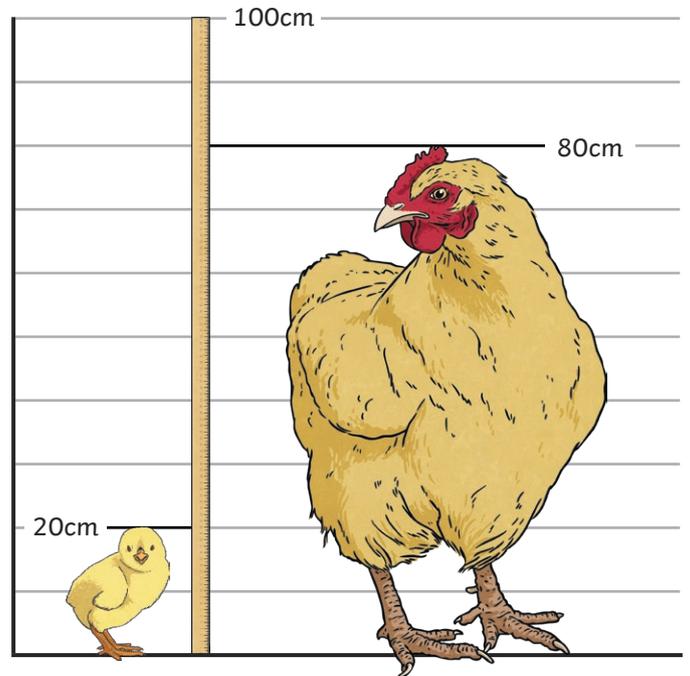

Michele says, "The adult chicken is 3 times as tall as the chick because you need 3 more lots of 20cm to make 80cm."

Do you agree with Michele? Explain your reasons.
